

AN INVESTIGATION OF THE EFFECTIVENESS OF SCHOOL TEACHERS

SMRITI NAGI ¹

¹ RESEARCH SCHOLAR, DEPARTMENT OF EDUCATION, RADHA GOVIND UNIVERSITY, RAMGARH, JHARKHAND.

ABSTRACT:

The goal of every teacher should be to improve the lives of their students. Students learn more when their teachers help them. The best way for teachers to accomplish these aims is obvious. Factors that are within the control of the instructor and variables related to the classroom environment are both essential components of good instruction. Being a good teacher entails engaging each and every one of your students. Maintaining a thirst for knowledge and holding each student to the highest standards are essential qualities of an excellent educator. Each student may be better reached by a teacher who employs a variety of teaching strategies. It is widely considered that instructors' tasks, including their teaching abilities, professional traits, and classroom atmosphere, greatly impact the success of students' quality education. It helps with the fact that students' development varies. By using their extensive professional traits and expertise in the classroom, successful educators establish learning environments that support student growth. To a considerable extent, outstanding teachers foster a positive classroom atmosphere and assist students in making substantial progress by exhibiting more sophisticated professional traits within a highly regimented learning environment. Therefore, in order to be successful instructors for their students' outcomes, teachers should be conscious of these aspects, prioritise areas for development, and aim to attain satisfying results. The purpose of this work is to investigate how successful educators are.

INTRODUCTION

In the process of teaching, there is a process that goes beyond the simple act of passing on knowledge. Ongoing alterations and improvements mark this attempt. The opening reveals a domain characterised by knowledge, understanding, expertise, and data. One of the most important factors in the delivery of a high-quality education is the efficiency with which teachers carry out their duties. The function of a teacher is often considered to be the most important social function overall. The specific knowledge, professionalism, and behaviour that teachers exhibit are the reasons why they are viewed with such high respect. People who receive education reflect the value of a country and the opportunities it offers. In the process of nation-building, educators are the most basic builders. The act of teaching is an all-encompassing activity that encompasses all parts of the learning and teaching experience. In this context, "environment" refers to the classroom setting, "interactions" refers to the interactions that take place between the instructor and the students, "educational techniques" refers to the methods

that are used, "communication abilities" refers to the teacher's performance, and "skills and competencies" refers to the educator's ability to meet the needs and interests of the students. An institution that does not have a teacher is analogous to a body that is devoid of a soul. Teachers that are skilled, competent, and effective have the ability to greatly improve the learning outcomes of their students for their students.

SIGNIFICANCE OF THE STUDY

There is a significant influence that communal expectations have on the contemporary world. In order to fulfil these requirements, many innovations of various sorts are continuously being implemented across a broad variety of business sectors, and new inventions of various kinds are continually being made available to consumers from the market. As a consequence of this, the educational system has to be reformed in order to mould the future generation of people in a manner that is capable of meeting the continuously growing demands of society. Although there are many essential markers of

great education, one of the most well-known is the efficacy of teachers. Consequently, the primary emphasis of educationists is on elevating this statistic in order to improve the quality of educators and achieve greater levels of effectiveness. Additionally, the community of the instructor contributes to an improvement in the overall quality of the job. For this reason, the investigator decided to focus their investigation on this particular parameter.

EFFECTIVE TEACHING

The term "teacher effectiveness" is an amalgam of "teacher" and "effectiveness." A teacher is someone who imparts knowledge to pupils in a formal educational context. To be effective is to bring about the desired results. To be a good teacher, one must be able to guide their pupils to achieve certain goals. The classroom becomes a magical place when a teacher is effective. He or she successfully engages pupils of different backgrounds in the learning process, resulting in suitable outcomes. Instructors who are good at what they do do not only employ a variety of strategies and approaches but also maintain a positive and engaging classroom climate, use examples from real life, and have a good sense of humour. All of the following contribute to a teacher's effectiveness: personality, self-awareness, language, reasoning ability, and outlook on life. In education, the function of the instructors is crucial. If a nation's fate is to be determined by the quality of its public school system, then the educator is the one who really controls that system. Unparalleled efforts by educators shape students into social beings, upstanding citizens who can make significant contributions to their communities and the world at large. But such transformation can only happen if we have competent educators who can influence the conduct of our children at a young age. However, these educators may show a commitment to helping their pupils reach their full potential by demonstrating a wealth of admirable traits, talents, and abilities. Several notable figures, including academics, administrators, educationists, and others, have recently acknowledged that providing a high-quality education is difficult. To produce high-quality students, the educational system is inadequate.

FACTORS AFFECTING TEACHER EFFECTIVENESS

The efficacy of a teacher is dependent on the instructor's level of expertise. An instructor's efficacy is ensured if he or she has extensive knowledge in the field. An effective educator goes to great lengths to ensure that all of his or her pupils understand complex concepts and uses various methods to keep their attention and participation throughout class.

- ✓ Teachers' experience - An factor that significantly affects a teacher's efficacy is the amount of experience the educator has had in the field. The efficiency of a teacher is often attributed to his or her grasp of the subject matter. Greater efficacy is associated with greater experience.
- ✓ Passion for his work—Having a genuine passion

for what one does is crucial for success in any field. A teacher may be more successful if he or she loves their pupils, their colleagues, and the organisation as a whole.

- ✓ Intelligence -The efficacy of a teacher is influenced by factors such as intelligence. His wit and wisdom can simplify any complex subject. Additionally, he or she makes use of his or her intellect to make the most of available resources in the classroom.
- ✓ Satisfaction—Teacher effectiveness is also influenced by student satisfaction. The effectiveness of a teacher's teaching is directly correlated to the degree to which he or she is content with his or her work, family, and community. A school's environment may be defined as the general vibe that permeates the building. The efficacy of teachers is directly correlated to the school atmosphere. When the atmosphere is pleasant, educators experience more joy and freedom. A teacher's performance is boosted by the support he receives from his colleagues and principal.
- ✓ Access to Materials - Teachers are more successful when they have access to the materials they need to do their jobs. A variety of tools, including laptops, projectors, and traditional whiteboards and blackboards, are being used to enhance the effectiveness of instruction. The use of these methods increases the level of participation and enthusiasm for learning on the part of pupils.
- ✓ Personality- A teacher's personality is the sum of their traits, actions, and character quirks. The way he or she acts and moves has a direct impact on how well the kids do in class. A teacher's pupils will emulate his or her helpfulness, hard effort, and determination if the instructor exemplifies these qualities.

SUCCESS IN CLASS AND TEACHER EFFECTIVENESS

A career in teaching necessitates continuous professional development to optimise students' learning outcomes. The commitment of a teacher to mastering their subject matter is critical to cultivating knowledge that extends beyond individual disciplines. His involvement in numerous studies and developments, along with action research initiatives, is essential. It is essential for educators to prioritise academic excellence, actively participate in continuous professional development, and remain informed about advancements in their disciplines. To achieve effectiveness in their role, a teacher must possess a deep understanding of their subject matter and effectively convey that knowledge to their students in an accurate manner. Ultimately, every educator must commit themselves fully to the continuous refinement of their teaching skills. Education serves as a fundamental mechanism for societal renewal, with educators occupying a crucial position in this dynamic. Productive citizens can only be nurtured through the guidance of effective

educators. The practice of teaching encompasses the development of conducive learning environments for students, as well as the extent to which students meet their learning objectives, both of which are fundamental traits of an effective educator. Research into India's educational history indicates that Karma Yoga emerged during an era when Gurus (teachers) prioritised the comprehensive development of their students. Acharya transforms labour into a form of devotional service to humanity, while karma yoga evolves into competence, perfection, and skill; thus, each responsibility enhances and fortifies the inner spirit of the students. Karma Yoga serves as the essential basis for understanding the profound significance of quality education. The current educational framework lacks the incorporation of these types of techniques. As a result, the intended objectives of education are not being achieved. The dynamics among the three parties engaged in the teaching process—teachers, students, and content—are in a state of continuous evolution in contemporary times. The effectiveness of a teacher in the classroom stems from a combination of various personal and professional attributes. For each category, we have outlined several characteristics that define an effective teacher, encompassing responsibilities and behaviours.

- An individual who demonstrates proficiency in teaching

Effective classroom management encompasses several key components:

- Effective classroom management involves planning and coordinating lessons, delivering those lessons, and monitoring students' strengths and areas for improvement.

INFLUENCES ON TEACHER EFFECTIVENESS

- Teaching aptitude, which is both a set of traits and a set of skills, is responsible for people's potential.
- Intelligence, a universal intellectual ability of a teacher to initiate a variety of endeavours.
- Principles, which are important for the continued existence of a society and its culture as well as for preventing major shifts in either.
- A person's self-concept includes their self-awareness, self-judgment, self-esteem, goals, and morality.
- A person's drive to succeed on the work is the driving force behind his or her actions and decisions.
- Being satisfied with one's job, a pleasant and impactful scenario that arises from the realisation that one's employment is fulfilling and that one is able to fulfil their important trade ethics.
- Attitude, which is the mental disposition to respond positively or negatively to a person, a goal, an event, or a set of circumstances.
- The term "school climate" refers to the overall atmosphere of a school and encompasses all the tangible, intangible, and social factors that influence student and staff conduct on school property.

- Characteristics such as being emotionally stable vs. emotionally unstable, being able-bodied vs. less able-bodied, being self-confident vs. hesitant, etc.

CONCLUSION

Teachers can transform their classrooms into enchanted places if they are successful in their endeavours. When it comes to efficiency, empowerment is the formula. A teacher is better off when they possess both of these abilities. To be considered a good educator, one must possess the capacity to communicate difficult concepts to their students in a manner that is not only comprehensible but also remembered. The empowerment of educators and the enhancement of their performance in the classroom are both necessary steps towards improving the quality of education. The most vulnerable and sensitive members of a nation are the people that educators work with. Constructing the behaviour of this group and directing their energy and potential in a constructive and appropriate direction is a task that is extremely challenging to accomplish. If educators had a more optimistic perspective on the teaching profession and all that it encompasses, they would be more willing to fulfil their duties in influencing the behaviour of future citizens, bringing about social change, and contributing to the growth of the country.

As a nation that is still in the process of growing, India lays a significant amount of responsibility on its teachers to equip their students with the knowledge and abilities that will assist in bringing their country up to the same level as more developed countries. The effectiveness of the instructors is one indicator of the quality of the education received. A superior teaching method has the potential to simplify and improve the efficiency of the learning process. If their instructor provides the appropriate guidance, students can learn more effectively. This is why a teacher's advanced degree is not the only factor that determines their ability to impart knowledge. Instructors must possess both knowledge and experience in the subject matter. To be a successful classroom instructor, you need to have a positive outlook on teaching, strong relationships with students, and competent technical abilities. These are all necessary ingredients.

EDUCATIONAL IMPLICATION

A significant portion of the teaching staff has demonstrated exceptional effectiveness. The authority ought to give them permission to do this. For the purpose of enhancing their performance in the classroom, the most successful educators need to be provided with more comprehensive chances for professional development. It is important that educators have the chance to improve their performance in a setting that encourages their professional development. The success of teachers in the classroom must be given top priority by all parties concerned, and it is imperative that they be supported in their continued professional development via various interventions.

It is of the utmost importance to acknowledge the

significant contribution that skilled educators make to the preservation of educational standards and the improvement of outcomes for students. Due to the fact that effectiveness spans all elements of a person's life, it is very necessary for instructors of secondary school students to improve their level of preparation in order to conform to the stringent requirements of their job. Increasing their various teaching talents and skills, as well as their passion for the teaching profession, their commitment to the learner, and their sense of duty to society, is one way to accomplish this goal. It is possible to dramatically improve the effectiveness of learning settings by investing in programs that educate teachers, provide assistance for mental health, and implement technology developments in the classroom. These are the policies that allow teachers to concentrate on teaching in the classroom rather than on administrative responsibilities.
